Detected Terms

Earth @ 0.0s — general

The third planet from the Sun, our home world, with a diameter of approximately 12,742 km and composed primarily of silicate rock and iron.

Moon @ 0.0s — general

Earth's only natural satellite, roughly 3,474 km in diameter, orbiting Earth at an average distance of 384,400 km.

solar system @ 0.0s — general

The gravitationally bound system of the Sun and all bodies that orbit it, including planets, moons, dwarf planets, asteroids, comets, and interplanetary dust.

Great Red Spot @ 0.0s — general

A massive, persistent anticyclonic storm on Jupiter, about 16,000–23,000 km across, noticeably larger than Earth.

Jupiter @ 0.0s — general

The largest planet in the Solar System, a gas giant with a diameter of about 139,820 km and a mass 317.8 times that of Earth.

Saturn @ 0.0s — general

A gas giant known for its prominent ring system, with a diameter of about 116,460 km and a mass 95.16 times that of Earth.

Saturn's rings @ 0.0s — general

A system of concentric rings composed primarily of ice particles, dust, and rock, extending up to 140,000 km from Saturn's center.

Sun @ 0.0s — general

The central star of the Solar System, a G-type main-sequence (G2V) star with a diameter of 1,392,700 km, providing the bulk of the system's energy.

Mars @ 0.0s — general

The fourth planet from the Sun, an iron-rich terrestrial planet with a diameter of about 6,779 km.

Neptune @ 0.0s — general

The eighth planet from the Sun, a gas giant with a diameter of about 49,244 km, known for its blue color and strong winds.

light year @ 0.0s — general

A unit of astronomical distance equal to the distance light travels in one Julian year, approximately 9.461×10^{12} km.

Milky Way galaxy @ 0.0s — general

The disk-shaped, barred spiral galaxy that contains the Solar System, estimated to be about 100,000 light■years in diameter and containing 100–400 billion stars.

Vy Canis Majoris @ 0.0s — general

A red hypergiant star in the constellation Canis Major, one of the largest known stars with a radius about 2,000 times that of the Sun.

NGC 6744 @ 0.0s — general

A nearby barred spiral galaxy similar in structure to the Milky Way, roughly twice its size with a diameter of about 200,000 light■years.

spiral galaxy @ 0.0s — general

A type of galaxy characterized by a flat, rotating disk of stars, gas, and dust with spiral arms extending from a central bulge.

Hubble Space Telescope @ 0.0s — general

A space-based observatory launched in 1990, deployed above the Earth's atmosphere to provide high■resolution imagery and spectroscopy across visible, ultraviolet, and near■infrared wavelengths.

Big Bang @ 0.0s — general

The prevailing cosmological model describing the early universe as an expansion from a hot, dense initial state occurring approximately 13.8 billion years ago.

star-forming period @ 0.0s — general

An epoch in the early universe, roughly 3–11 billion years after the Big Bang, when conditions were conducive to the rapid birth of stars.
